

Spanish Language Information

Per a Consolidation Working Group member's question about elementary families reporting that another language (Spanish) is spoken in the home, here's information provided by USD 497's chief academic officer, Kim Bodensteiner:

Based on parent(s) reporting another language spoken in the home, the number reporting Spanish in grades K-5 is 102 out of 543. Of the families who reported another language spoken in the home, the percent reporting Spanish is 18.78%.

At last count in December, there were 4,666 students K-5. Overall that would be 2.18% of the total elementary population reporting Spanish spoken in the home.
